## About Me

I've been involved with internet marketing since 2009.

My main focus had been SEO because I loved the idea of ranking a site one time and getting passive income for months.

For years I had built niche websites around affiliate products and ranked them in the search engines.

Then once the major Google algorithm changes occurred starting in 2011 I realized I needed to do something to diversify myself better.

Some of my top earning sites had been knocked down over night.

I started rebuilding sites and spent countless days trying different on-page and off-page SEO techniques to get them rank again.

Some of them did alright while others still where nowhere to be found.

This was frustrating experience but it became a great turning point to my Affiliate Marketing business.

I had heard about video marketing and decided to give it a try.

After making my first couple of videos I realized how easy it was and was surprised at how quick they were to make money online.

With video marketing you no longer had to wait weeks to months before seeing results!

No more slow and cautious link building.

By using very basic SEO skills you can get a video ranked within days!

And best of all, you can still enjoy the benefits of passive income.

In fact the first video I made back in early 2011 still makes money on a daily basis.

You can promote anything you want with the traffic you get from videos.

Such as affiliate products, your own products, or you can even use this video traffic to build your list.

This course will go over the exact strategies I use to make over \$5,000 per month.

It may sound simple, and you may have even heard of this kind of stuff before.
